Project Development Phase
Sprint-1

Python Script

Date	16 November 2022
Team ID	PNT2022TMID32468
Project Name	IOT BASED CROP PROTECTION SYSTEM FOR AGRICULTURE

Description:

Instead of generating sensor values from the hardware circuits, we are using random module to generate sensor data and to automate IOT based crop protection system through the python code. The data generated from the python code are being stored in the IBM cloud.

Python Code:

```python
import random
import ibmiotf.application
import ibmiotf.device
from time import sleep
import sys

#IBM Watson Device Credentials...
organization = "tw9ckq"
deviceType = "jade"
deviceId = "7010"
authMethod = "token"
authToken = "9944893843"

def myCommandCallback(cmd):
    print("Command received: %s" % cmd.data['command'])
    status=cmd.data['command']
    if status=="sprinkler_on":
        print ("sprinkler is turning ON")
    else :
        print ("sprinkler is turning OFF")

try:
    deviceOptions = {"org": organization, "type": deviceType, "id": deviceId, "auth-method": authMethod, "auth-token": authToken}
    deviceCli = ibmiotf.device.Client(deviceOptions)

except Exception as e:
```

```python
        print("Exception detected in connecting device: %s" % str(e))
        sys.exit()

#Connecting to IBM watson...
deviceCli.connect()

while True:
    #Getting values from sensors...
    temp_sensor = round( random.uniform(0,80),2)
    PH_sensor = round(random.uniform(1,14),3)
    camera = ["Detected","Not Detected","Not Detected","Not Detected","Not Detected","Not Detected",]
    camera_reading = random.choice(camera)
    flame = ["Detected","Not Detected","Not Detected","Not Detected","Not Detected","Not Detected",]
    flame_reading = random.choice(flame)
    moist_level = round(random.uniform(0,100),2)
    water_level = round(random.uniform(0,30),2)
